In today's world,

the traditional approach to business management is being replaced with a more decision-making attitude, creating an acute need for a comprehensive business process management solution that can accommodate blurred reporting structures and interdepartmental collaboration.

OrbFusion addresses this need as a business process management solution with a broad set of tools that can handle the most complex business process requirements on an enterprise scale. **OrbFusion** delivers real-time, practicable information to its users with the aim of improving decision-making. **OrbFusion** provides a vast scope of functionality that, amongst other things, improves the efficacy of your business processes and allows for the effortless capturing, reviewing, editing or approval of documents within these processes.

The **OrbFusion** solution can connect to many other systems and databases within your organisation, consolidating the processes and data silos associated with the different lines of business within your organisation. This ability to integrate with your organisation's business process management systems allows for greater visibility of relevant information which is centralised in one global browser-based solution.

OrbFusion features a flexible workflow engine that offers robust functionality and visual process management to assist the flow of information and task allocation within your business processes, further enabling rapid deployment across your organisation.

BRIDGING THE GAP

OrbFusion has specifically been developed to bridge the gaps between systems to ensure that all your organisation's business needs are met. This is achieved while simultaneously increasing your organisation's agility by improving your ability to respond to change while also promoting efficiency in your responses to the change within your organisation's environment.

INTEROPERABILITY

OrbFusion integrates with your organisation's current business management systems and databases, affording its users a consolidated updated view of information while formalising disparate data. This not only limits the potential for making erroneous decisions based on outdated information, but also increases the data integrity by ensuring that all the information stored in your organisation's systems are consolidated into one view. Such an updated global view aids you in informed decision making.

CONFIGURABILITY

OrbFusion has been developed to assist your organisation in facilitating rapid change while still promoting simplicity. Despite being a sophisticated solution, it offers an interface which can easily be customised without the user needing extensive knowledge of complex code.

To improve user experience, **OrbFusion** affords the user the ability to fully customise the interface to display the user's most relevant information and create dynamic enquiries. Utilising these fully user customisable forms increase the efficiency of the overall workflow.

In addition,

the elements involved in dynamic business process requirements can effectively be configured to suit business needs while adhering to business policy. To achieve this, OrbFusion offers an advanced interface which allows you to customize and edit any of the elements within these processes quickly. With globalisation occurring at such a fast pace organizations have various stakeholders who are communicating and collaborating across borders. OrbFusion facilitates this cross border cooperation by localizing the data housed within OrbFusion. This is further expedited by the fact that OrbFusion can be adapted to country specific requirements such as multicurrency and legislation.

WORKFLOW

OrbFusion features a powerful workflow engine which offers robust functionality and visual process modelling. This is accompanied by a straight-forward visual toolset, which enables the rapid creation, deployment and maintenance of your business processes by offering a simple drag – and – drop interface.

Due to its role-based approach, OrbFusion further allows you to give particular roles the capability to adapt business processes or edit documents. This can be done effortlessly and without technical support so as to ensure an effective response to changes within your organization's environment.With this role-based focus, OrbFusion further expedites the keeping of a clear global audit trail.

COLLABORATION & CONNECTIVITY

Crucial to efficient workflow is the collaboration and connectivity of your organisation's staff which OrbFusion facilitates. Users collaborate with the aim of maintaining the business processes as well as to increase the pace and level of efficiency of which documents within these processes are actioned.

During the execution of a business process (for example), the completion of a workflow task initiates an alert for the next user (either internally or externally) in the workflow to take action. These notifications are based on user defined templates and provide the ability for other relevant data or attachments to accompany the message.

To avoid bottlenecks within a business process, the steps within the process can easily be escalated using the predefined escalation rules. The policies for such escalations are defined for each step within the business process which increases your organization's competence in managing the workflow.

Thanks to the fact that it is a web-based application that can function across browsers, OrbFusion further enables users to connect to the system while working off-site.

AUDITABILITY & MONITORING

By keeping a comprehensive audit trail of all actions performed in OrbFusion, a transparent view of your key business processes is provided. An updated, clear and visual audit trail therefore increases user accountability and enables the reviewing of the process followed.

You can also monitor the efficiency of processes, either on a specific task or for a phase within a process. Lead-times can be defined for a process as a base line for monitoring the performance of the business process. To illuminate the efficiency of the process and aid with identifying and improving the performance of the process, users can refer to the graphical views provided within the OrbFusion solution.

REASONS
TO INVEST IN
ORBFUSION

Rapidly deployable business process management solution.

Wide set of tools for handling complex business processes.

Scalable to the requirements of your organisation.

Assists you to enforce your business policies and procedures.
